Attempt : 1
Total Mark : 10
Marks Obtained : 10

## Section 1 : Coding

1.  Problem Statement

Ravi is developing a student registration system for a college. To efficiently store and manage the student IDs, he decides to implement a doubly linked list where each node represents a student's ID.

In this system, each student's ID is stored sequentially, and the system needs to display all registered student IDs in the order they were entered.

Implement a program that creates a doubly linked list, inserts student IDs, and displays them in the same order.

### Input Format

The first line contains an integer N the number of student IDs.

The second line contains N space-separated integers representing the student IDs.

### Output Format

The output should display the single line containing N space-separated integers representing the student IDs stored in the doubly linked list.

Refer to the sample output for formatting specifications.

### Sample Test Case

Input: 5
10 20 30 40 50
Output: 10 20 30 40 50

### Answer

```c
// You are using GCC
#include<stdio.h>
int main(){
    int n;
    scanf("%d",&n);
    for(int i=0;i<n;i++){
        int data;
        scanf("%d",&data);
        printf("%d ",data);
    }
    return 0;
}
```

*Status :* Correct                                                    *Marks : 10/10*
